

TRITOflex offers an elegant mix of simplicity and durability. Perfect for tricky metal roof restorations.

WHY TRITOFLEX?

- 1,900% elongation allows the membrane to flex with the roof
- Prevents future rust and corrosion
- Avoid an expensive tear-off and replacement
- Avoid drilling thousands of holes and fasteners into the roof

PERFORMANCE

- Non-disruptive, no odor, re-roof without interruption
- Warranty covers ponding water and heavy hail.
- Thermal coating reduces expansion and contraction and also saves money.

CASE STUDY

The 20-year-old rusted metal roof system over this high-volume bank began to leak heavily where metal panels had moved and left areas for water to enter the building. Without disruption, a TRITOflex fluid-applied rubber roofing system was installed, restoring the roof's watertight condition and **saving the company 60%**.
